Sealed Miniature Toggle Switches

M2T Series: Interior bushing is sealed with o-ring which surrounds the actuator. Bushing and top of the housing are one molded piece, achieving the exterior seal. Ultrasonic welding is used to seal the bushing unit to the base. Terminals are epoxy sealed for safeguarding the switch at the base.

Features: • **Electrical Capacity:** Logic Level (code G): 0.4VA maximum @ 28V AC/DC maximum. • **Dielectric Strength:** 1,000VAC minimum between contacts; 1,500VAC minimum between contacts and case. • **Mechanical Life:** 100,000 operations minimum • **Electrical Life:** 50,000 operations minimum for gold; 25,000 operations minimum for silver • **Operating Temperature Range:** -30°C ~ 85°C

B Series: Sealed body construction permits switches to be subjected to time- and money-saving automated soldering techniques. Can be safely cleaned of flux without fear of compromising operating characteristics.

Features: • **Electrical Capacity:** Logic Level: 0.4VA maximum @ 28V AC/DC maximum • **Dielectric Strength:** 500VAC minimum • **Mechanical Life:** 100,000 operations minimum for On-On and On-Off-On • **Electrical Life:** 50,000 operations minimum • **Operating Temperature Range:** -30°C ~ 85°C

A22 Series Switches

Omron's A22 Series of pushbutton switches offer flexible features not found in other competitors switches. Switch blocks are hand snapped into the back of the switch body enabling the end user to replace, add or modify the switching outputs in seconds. If you need a DP switch simply snap on another switch block to complete your needs. Switch blocks feature screw-recessed (finger safe) terminals to meet both North American and European safety standards. Switches are water, oil and dust sealed to IP65 standards. Switch units come completely assembled and ready for installation. Purchase additional switch blocks for replacement and additions.

OMRON Basic Switches

Omron's "Z" Series switches feature 15A contacts which directly switches such loads as motors, halogen lamps and solenoids.
Omron's "A" Series has the same body yet switches 20A loads with large inrush currents. All switches feature screw terminal connections and are UL listed CSA certified. Both series are momentary action, SPDT versions.
Omron's "TZ" Series incorporate a ceramic body, cobalt-alloy spring and special-alloy contact, thus ensuring high contact reliability at high ambient temperature. Smoothly operates at an ambient temperature of 400°C. Operates from -65°C ~ 400°C

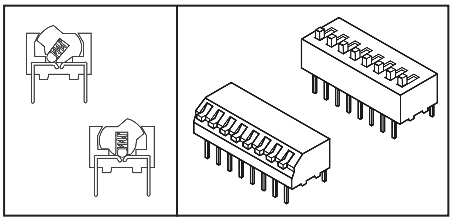
Grayhill DIP Switches



Grayhill's unique spring and ball contact design offers unparalleled reliability compared to conventional wiping contact designs. When actuated the ball rests between two contacts allowing multiple points of contact while the spring compression is at maximum pressure. Temperature, humidity and vibration have minimal affect on this design.

Magnetic Reed Sensors

Meder Magnetic Sensors are magnetically operated proximity switches for either surface mounting, PCB or panel mounting. Use for telephone hook switch detection, door and window sensing, limit switches for garage doors, hoists and conveyers. Switches are completely sealed for indoor/outdoor operation, available in various magnetic sensitivities, perfect for auto-insert equipment and automated processes. All sensors will actuate when a magnetic field is introduced to them and will remain actuated until the magnetic field is removed. **Operating Temp:** -20°C ~ 85°C, -20°C ~ 130°C for Fig. 3.

Fig. 1

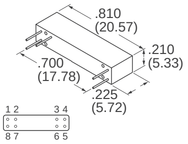
The 2200 Series is Ideally suited to the needs of Automated Test Equipment and RF requirements. High speed switching compared to electro-mechanical relays. Hermetically sealed contacts for long life. Epoxy coated steel shell provides magnetic shielding. Optional Electrostatic Shield for reducing capacitive coupling



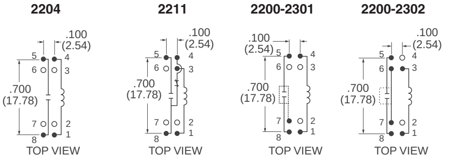


Fig. 2

The Coto 2300 Series was designed to offer the densest packaging available in a multiple reed relay. The size and footprint of the 2300 series compliment the 2200 and 2900 series relays. The 1 Form C model is constructed with individual switch capsules for the normally open and magnetically biased normally closed contacts which are more reliable than the spring actuated 1 Form C reed switches.

The 5500 Series High Voltage Reed Relays are ideally suited to the needs of Instrumentation Industrial Process Controls and General Purpose requirements. High Dielectric Strength - 10,000 Volts isolation across contacts. Hermetically sealed Tungsten contacts for long life. Low contact resistance - 0.030 Ω typical. Magnetic Shield standard.

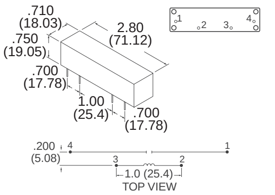

Fig. 4

The 7000 Series is ideally suited to the needs of Instrumentation, Data Acquisition, Process Control, Telecommunications and General Purpose requirements. These models are specifically designed for high quality and reliability with versatile switching capabilities and contact forms. Wide range of switching capabilities. Potted in metal shell - Magnetic Shield. PCB mounting versatility - 1.0" x 0.100" grid.

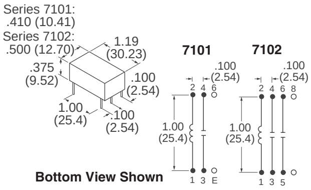

Fig. 5

The 8000 Series Dip Relay is ideal for the high reliability of ATE, Instrumentation and Data Acquisition applications. Proven to 500 million operations. The Coto 8L Spartan Series relays combine Coto quality and economy in the industry standard 14 pin molded DIP package. This series will cross to all competitive DIP packages and is ideal for telecom, security, and other general purpose applications.

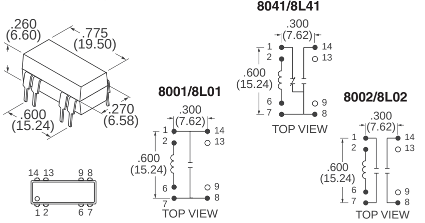

Fig. 6

The SIP relay is the industry choice for a wide variety of designs where economy, performance and a compact package are needed. The 9007 Spartan Series is a general purpose economy version of the 9001 for applications with less stringent requirements. The 9081 Spartan Series is similar to the 9007, but with alternate industry standard footprints to accommodate other options, including Form C types. These relays are well suited for applications in Security, Instrumentation and Modems.

The SIP relay is the industry choice for a wide variety of designs where economy, performance and a compact package are needed. The 9081C are 2 x SPST-C/O relays offered in industry standard packages. Use 9081C (.2 x .4 x .2) SIP for industry standard footprint applications or 9081C1 (.2 x .2 x .2 x .2) for standard footprint applications requiring a SPDT function. These relays are well-suited for applications in Security, Instrumentation and Modems.

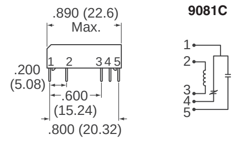

Fig. 8

The 9012 package dimensions are 47% smaller than standard 9000 SIPs, yet the relay retains the 10W switch ratings of its larger counterparts. The 9011 package dimensions is 65% smaller than the standard 9000 SIPs and incorporates the RI-70 switch rated 3W. The 9117 goes one step further, reducing package size by 65% from standard 9000 SIP's. This is the smallest SIP footprint with a 3W rating. These miniature SIP relays are ideal for use in ATE applications and other high reliability test, measurements and telecommunications applications where high board density and long life are key requirements.

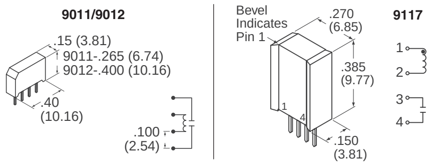

Fig. 9 ***NEW!***

The 9092 model, because of its increased height, allows for incorporation of 2 form A switches in the same board space. These miniature SIP relays utilize Coto's 10W switch technology, making these SIP relays ideal for use in ATE applications and other high reliability test, measurement and telecommunications applications where high board density and long life are key requirements.

COTO TECHNOLOGY

RF Relays

B10 Relays: Coto's Ball Grid Array (BGA) construction offers a breakthrough in reed relay performance. This patented technology allows for shorter RF paths in a controlled 50Ω environment to minimize signal attenuation. The designer is now able to switch or pass signals with wider bandwidth and faster rise time than alternative technologies. **B40 Relays:** The B40 is four independent form A channels in one quad package. This 4-in-one BGA packaging allows relays to be integrated easily on boards designed for surface mount processing. **B41 Relays:** The B41 is four independent form A channels in one planar quad package. Coto's Ball Grid Array (BGA) patented technology allows for shorter RF paths in a controlled 50Ω environment to minimize signal attenuation. The designer is now able to switch or pass signals with wider bandwidth and faster rise time than alternative technologies. **Applications:** • IC Testers • In-Line Relay Testers • Memory Testers • Mixed Signal Testers • High Bandpass Applications

ITT's MPS Series Magnetic Proximity Sensors operate when a magnetic field approaches two magnetic reed blades. The magnetic field overcomes the spring tension of the blades and brings the contacts together. When the magnetic actuator is removed, the reeds separate by their own spring tension. Comes complete with reed switch and matching actuator. **FEATURES:** • Long Life Expectancy — 10 million operations • Housing made of rugged impact resistant ABS plastic that meets or exceeds UL requirements for fire retardation • Sealed Contacts allowing the reed to operate in damp and dusty environments • Wide gap performance makes magnet and switch alignment less critical. **SPECIFICATIONS:** • **Contact Ratings:** 100VDC or 100VAC maximum @ 0.3 Amp Maximum; 1.0 Amp Maximum Carry Current • **Operating Temperature:** -40°C ~ 100°C • **Mechanical & Electrical Life:** 10 Million Operations **MATERIALS:** • **Housing/Spacer/Cover:** ABS Plastic (UL94V-0), white • **Wire Leads:** UL1061, 22 AWG: stranded, made of copper or aluminum; Length: 12" (30.48cm) with ends stripped; Color: white • **Magnets:** Alnico V and Ceramic Ferrite 8 (MPS80WG model only).

NOTE: Wide gap contacts are polarity sensitive. Use alignment dots for proper installation of surface mount contacts.

HAMLIN Magnetic Reed Switches

The basic reed switch consists of two ferromagnetic reeds, hermetically sealed in a gas filled capsule. When these reeds are introduced to a magnetic field, they assume opposite polarities and attract toward each other closing the contacts. When the magnetic field is reduced beyond the spring force of the reeds the contacts again spring open. Hamlin's reed switches are ideal in auto, marine and moist environment applications and operating environments can be almost anywhere from air, submerged in water or fuels, to dust-laden atmospheres. Ampere Turns (AT) is the reed switches sensitivity to a magnetic field. The smaller AT number, the more sensitive the reed switch to magnetic fields.

Magnets

A permanent magnet is the most common source for operating the magnetic reed switch. The method used to position the magnet depends upon the switching requirement but can be used in one of four basic techniques; perpendicular or parallel motion (up and down, side to side) rotation (revolving magnet or switch), shielding (passing a ferromagnetic material between the switch and magnet) or biasing which is using one magnet of opposite polarity to cancel another magnet's lines of force.

Made from Neodymium Iron Boron (NdFeB), rare earth magnets. Neodymium Magnets are the most powerful permanent magnetic materials commercially available. Increasing the size of a magnet also increases magnetic strength.

The magnets are nickel plated.

NEW! Ultra-Mini Reed Switches

SCR Devices Industry unique flat bladed, square reed switches. Ideally suited for small signal to moderate load switching tasks. With sputtered ruthenium contacts and laser-sealed glass, the FR series reed switch from SRC Devices is one of the most reliable reed switches available today. In addition, our square glass and flat leads allow for seamless integration into a high speed, automated assembly process via our standard SMT configuration. SRC Devices reed switches are the only reed switches fully SMT compatible by design, with or without overmolding. The magnetic force (expressed in NI, AT or Ampere Turns) required to cause the reed switch contacts to close is called the pull-in or operate AT.

Magnetic Reed Switches

Reed switches have been used in thousands of applications from non-contact switches to sensing direction, speed and position. Reed switches are a reliable, low cost, low current switch that are hermitically sealed for operation in the most demanding environments. The magnetic force (expressed in NI, AT or Ampere Turns) required to cause the reed switch contacts to close is called the pull-in or operate AT.

NEW! Over Molded Reed Switches

All the advantages of the non-molded DYAD®, plus the added strength of a low-stress plastic encapsulation. The SRC Devices Molded DYAD is designed for the harshest, most demanding applications. This plastic shell provides superior mechanical strength, eliminates concerns over handling glass switches, and provides an ideal solution for high speed, automated assembly environments. The magnetic force (expressed in NI, AT or Ampere Turns) required to cause the reed switch contacts to close is called the pull-in or operate AT.

Applications:

- **Security**
  - Proximity Sensing
  - Smoke Alarms
- **Automotive**
  - Level Sensor
  - Lamp Current Sensor

Compare the Technological Advantages of Omron's HF Relays

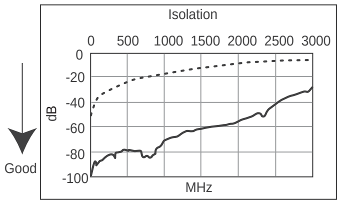
Competing Technology	Competing Technology Advantages	Omron Advantages	Omron HF Relay
Metal can coaxial RF relays	• Small size • 2-Form-C contacts	• SMT • Reverse contact and Y terminal versions • Better performance at 4GHz	G6Z
GaAs FETs	Solid state: • Greater number of operations • Faster operating speed • Smaller	• 10W power switching • Better insertion and return loss • Less distortion at higher frequencies • More cost-effective technology	G6Z, G6W
GaAs MMIC switches	Solid state: • Greater number of operations • Faster operating speed • Smaller	• 10W power switching • Better insertion and return loss • Less distortion at higher frequencies • More cost-effective technology	G6W
PIN diode arrays	Solid state: • Greater number of operations • Faster operating speed	• Superior HF characteristics • Much broader bandwidth	G6Z, G6W
Other electromechanical RF relays	—	• Superior HF characteristics • Much broader bandwidth	G6K-RF, G6Z, G6W

Advantages of Microstrip Line Construction

- Maintains signal integrity from PCB strip line to the relay compared to coaxial types
- Reduces transmission loss
- Provides superior impedance matching
- Assures high isolation to eliminate cross-talk
- Reduced attenuation
- Lower insertion loss

HF Relay:
Only 0.0001% signal is transmitted.

Conventional Relay:
1% signal is transmitted even when contact is opened.



HF Relay:
G6Z: 9% signal is lost.
G6W: only 3% signal is lost.

Conventional Relay:
50% signal is lost.

Timers/Time Delay Relays

Potter & Brumfield timer relays are versatile time/function adjustable relays for industrial and time delay type applications. By setting the timing mode, selecting the time duration and applying 120VAC to power the timing circuitry, a dry contact relay will trip On or Off at the end of the set time. Delay-On or Delay-Off modes will start upon power up and delay turning the relay output On or Off for the user selected time Using the Cycle or Repeat Mode will put the timer in a continuous On and Off cycle where the time On and time Off are equal lengths. Model CRB relays enable separate On and Off adjustable times for Cycle timing.

Solid State Relays

Potter & Brumfield Models SSR are SPST "Hockey Puck" style solid state relays for general power switching applications. These feature a dual, back to back SCR, Zero-Cross switching output for most inductive and high inrush loads. Parts ending in "R" are random turn-on outputs for phase control applications. SSRD (Dual) and SSRQ (Quad) are multiple output relays where each output is controlled separately. SSRT are SPST "Hockey Puck" style relays with snubberless Triac Outputs for inductive switching and high inrush applications. Enhanced noise immunity (designed to meet level 3 requirements of European EMC Directive). Includes LED indicator and floating terminal design.

Safety Relays

Safety-implemented circuits must be control reliable as mandated in the U.S. and European safety standards. Safety relays have the function to positively isolate safety circuits of emergency shut-off, machine control, elevator and escalator controls, light barrier control, furnaces, medical apparatus or any application requiring redundant shutoff safety requirements. These relays are designed with force guided contacts where in the event of a fault (1 contact welds closed), the second contact must carry out the switch off condition.

PhotoMOS Relays

Features:
- PhotoMOS relays combine the advantages of standard electromechanical relays with that of solid state products
- Very fast response times with very low leakage and exceedingly long life times
- Reliability and lower input currents are also improved over conventional relays

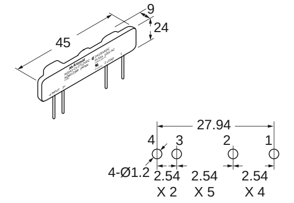
SIP Conformal Coated Solid State Relays



Dim. in mm

AQ2 SIP SSRs are designed as suitable drivers for AC motors, solenoids, valves, etc. These offer excellent noise resistance with an integrated snubber circuit and ultra thin body (only 9mm) for maintenance-free, long life switching. Zero-Cross is a low noise switching output whereas Phase Controlled are ideal for phase controlled applications such as motor speed control and light dimming.

CLARE
An IXYS Company

Solid State Relays and Switches

As a leading supplier of Solid State Relays (SSRs) to the communications industry, Clare has pioneered the application of SSR solutions that both replace electromechanical devices and enhance performance in wireline interface applications. Clare's products enable communications by providing the critical interface between high voltage electrical signals and the low voltage electronics that process those signals. LITELINK III single-chip silicon phone line interfaces (DAA) use optical technology to include the required isolation barrier in the package, eliminating high cost capacitors or transformers. This solution saves cost relative to competitive solutions through reduced passive component count and less board space. LITELINK III supports differential and single-end receive and transmit ports providing an easy interface to popular modem IC's codecs and voice SLAC devices.

Features: • Voice and data applications • Modem DAA for speeds up to V.92 • Caller-ID reception • 3.3 or 5V power supply

Applications: • Computer telephony • Satellite set-top box • V.92 modems • Fax machines • Voice mail systems • Automated banking • Security systems

Compare the Technological Advantages of Omron's G3VM MOS FET Relays

Current Technology vs.	The Advantages of Omron's MOS FET Relays
Reed Relays	**G3VM Series offers:** • Longer life • Lower pick-up power • Smaller size/less board space • Faster switching speed • Greater resistance to shock/vibration • Higher isolation voltages
Photocouplers	**G3VM Series offers:** • Linear ON-resistance • High isolation voltage and increased sensitivity • The ability to switch AC and DC loads • Voltage control up to 600V
Electromechanical Relays	**G3VM Series offers:** • Longer life • Lower pick-up power • Lower profile and smaller footprint • High-speed operation • Greater resistance to shock and vibration • Higher isolation voltages

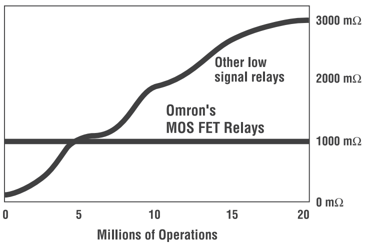
Current Technology vs.	The Advantages of Omron's MOS FET Relays
Solid State Relays with Thyristor Output	**G3VM Series offers:** • Linear ON-resistance • The ability to switch AC and DC loads • The ability to control high frequency loads • No signal distortion
Solid State Relays with BJT Output	**G3VM Series offers:** • Lower ON-state offset voltages • Minimal leakage current • Better voltage control • No signal distortion
Solid State Relays with Triac Output	**G3VM Series offers:** • Minimal leakage current • Increased protection, eliminating the need for a snubber circuit • No signal distortion

Advantages of MOS FET Technology and Construction

60% smaller than reed relays and still outperforms the competition.

The G3VM delivers design flexibility without sacrificing accuracy or performance. It's now possible for designers to give their products more functionality and reduce overall machine size.

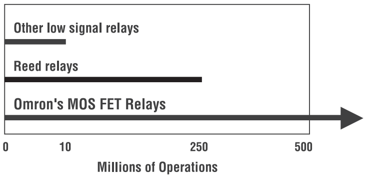
Contact Resistance

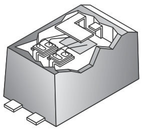


100,000 hours and still going

An independent firm ran tests on the only part of the G3VM that might possibly waver in performance - the LED chip. They simulated operation for a total of 100,000 hours (equivalent to more than 11 years!) and the G3VM was still operating successfully.

Mechanical Life

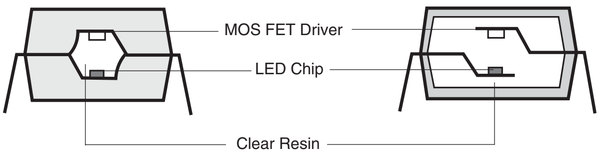




For Greatest Accuracy — it has to be White Resin

Omron's White Mold Resin

Competitor's Black Mold Resin



For maximum performance and accuracy, the G3VM is cast in white resin, which reflects more light from the LED chip to the MOS FET driver than black resin, which absorbs light. White resin also helps the relay dissipate heat more effectively. This means relays can be placed closer together on circuit boards with no worry of overheating, and no loss of accuracy or function.

OMRON Solid State Relays

Omron's G3VM relays are PCB and SMT solid state switches that are capable of controlling voltages up to 600V. Extremely low input currents, low ON-State Resistance and small packages make these relays ideal for microprocessor and logic switching. Current limiting input resistor required for operation. Packages include 4, 6 and 8 pin Dip, SMT, or SOP packages or use the extremely small 4-SSOP package for extremely small board space requirements. Relays will switch both AC or DC voltages. G3M and G3MB relays are larger current relays but offered in a SIP package to reduce board space. Perfect for controlling pumps, alarms, solenoids and other inductive/capacitive loads. Use zero-cross for general power switching or highly inductive loads or use Phase Controlled for output control of motor speed controls or light dimming. The G3R relays are drop-in replacements to the popular G2R Eletromechanical relays. Perfect for compact Din-Rail mounting and applications requiring the long life of solid state relays. G3TC series are replacement to standard I/O modules. Replaces Opto22, Gordos and many other I/O modules. Perfect for multiple output controls.

Crydom's G2 series of SSR's feature extremely low RDSon, low leakage and long lifetimes. Crydom's SSR's typically comprise an optical coupler, the output of which either drives the line directly or is used to switch a high-power device, such as a silicon-controlled rectifier (SCR) or thyristor. Whatever the drive component, it's the optical-isolation and no-moving-part aspects of the device that grant its many performance features. These features include high I/O isolation (though leakage current is a problem), long life (measured in millions of cycles), low acoustic noise, no contact bounce/arcing, mechanical ruggedness, and low drive-current requirements. They are available in tube packaging for small quantities and prototype work. Tape and reel packaging for automated insertion equipment.

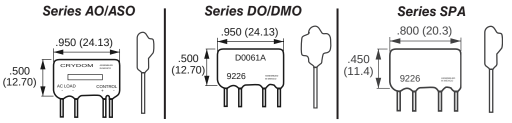
These solid state relays combine small size and high ratings in a PC-board-mounted SPST-NO design. Available with (S30 types) or without snubber network (S3 types), Series 3 is an ideal replacement for power reed relays in microprocessor or computer-based logic level systems. Designed for long, reliable service in demanding industrial environments.

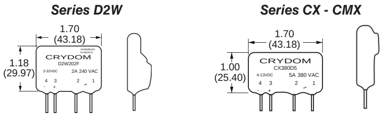
Fig. 2



Series AO/ASO • SPST-NO miniature SIP solid state relays • Designed for switching highly inductive, low current loads such as solenoids. Also suitable for all loads up to 1.5A. R suffix are random turn-on versions.

Series DO/DMO • SPST-NO DC bipolar transistor output relays in epoxy-coated packages utilize the popular .10" grid lead spacing. DMO063 is mosfet output rated at 3A/60VDC.

Fig. 3



Series D2W • Printed Circuit Board Mounting • Features an epoxy-coated package for exceptional environmental protection. Pinouts are compatible with OAC type I/O modules.

Series CX - CMX • Ultra High Surge • Printed Circuit Board Mounting • SPST-NO relays achieve the highest power switching capability in a PC-mounted air-cooled package. Advanced features include exceptional steady state current, plus ultra-high surge ratings. New DC output SPST-NO solid state relays use MOSFET output for high switching capabilities in a PC-mount air-cooled package. Pinouts are compatible with Series 6 and OAC type I/O modules.

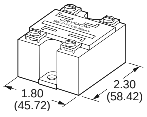
Series PCV Analog Power Controller



The Series PCV Analog Input Power Controllers are 0-100% variable power controllers for 120 or 240VAC loads which vary with an analog input of 2 to 10VDC. The input and output are proportional by integrating a complete phase fired logic system and a solid state relay in the same package. Applications include heaters and lighting, motors and feeders, etc.

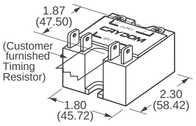
Series DSD, DLD Time Delay Relay

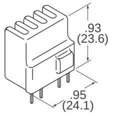


These Delay-On time delay relays offer customers to externally adjust their delay time by selecting the value of the external customer supplied resistor. DSD are short time delays and DLD are longer time delay durations. Timing resistors should be 1/4 watt or higher.

Typical Turn-On Delay For Various Timing Resistances

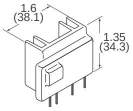
Resistor	Time (DSD)	Time (DLD)
0 (Short)	0.10 sec.	1.6 sec.
10KΩ	0.19 sec.	3.1 sec.
100KΩ	0.94 sec.	15 sec.
470KΩ	4.0 sec.	64 sec.
1.0MΩ	8.3 sec.	133 sec.

Fig. 4 **PF Series**



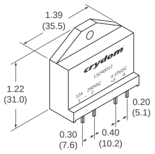
PowerFin™ series delivers the highest ratings of any single in-line package (SIP). The integral heat sink design can operate at 25 amps RMS in forced air at 85°C case temp. With natural convection in free air, it rates 10 amps RMS at 25°C ambient.

ASPF Series



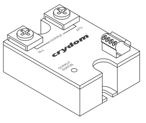
ASPF SSR incorporates the PowerFin™ design with an integral heat sink on the compact Mini-SIP package. Rated at 3.0 AMPS up to 45°C, this SPST-NO AC output SSR is for applications where precise electrical power control is essential. Zero voltage or random switching (R suffix) versions are offered.

Fig. 5



Crydom's LS family of SPST-NO relays achieves the highest power switching capability in a PC-mounted air-cooled package. Output consists of an SCR AC switch and is available in zero-cross and random turn-on (suffix R).

Fig. 6



The MCST series of controls is designed to provide adjustable surge reducing soft-start and soft-stop control for any load which would benefit from a gradual application/shut down and provide Crydom SSR switching within one package. Adjustable ramp times.

Fig. 7

Models SST120 and SST240 auxiliary function modules gradually apply power to the load when energized by the control voltage. Part sold complete with soft-start module and relay.

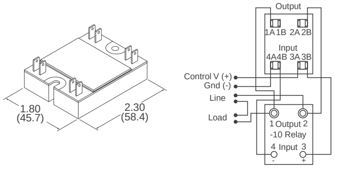


Fig. 8

RPC series proportional controllers provide a cost effective method of controlling power in many different applications such as heaters, universal motors or incandescent lamps. A customer provided potentiometer is all that is required for control.

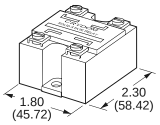
Solid State Relays

Fig. 1



Series 1, HD, HA: • These SPST-NO relays deliver proven reliability in the most demanding applications. Output consists of an SCR AC switch, available in either zero voltage turn-on or random turn-on, phase controlled models. (-10 versions are phase controlled. Crydom part numbers ending in "B" are normally closed versions.)

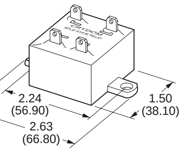
Series T: • Industry Standard Package • Snubbers are included for high DV/DT applications and inductive loads, together with zero-voltage switching to reduce inrush currents and electrical noise.

Series H12: • High voltage relays use IC driven circuits for switching loads up to 660 VAC with 1200 Volts blocking standard.

Series 1-DC: • Low On-State Resistance • Paralleling Capability for Higher Currents • DC output relays feature MOSFET technology for low on-state resistance, assuring easy paralleling and switching capabilities to 40 amps at 100 VDC.

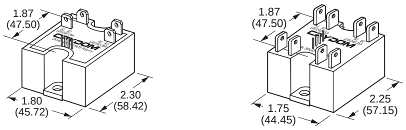
Series CS: • Low Leakage • SCR AC switch output models feature low off-state leakage (snubberless), zero-voltage switching and have a broadened operating range at both 120V/240VAC line voltages.

Fig. 2



Series EZ: • Low Leakage • Quick Connect Terminals • Offers a low profile package with the convenience of quick connect terminals • 4000 Vrms opto-isolation and low off-state leakage are standard.

Fig. 3

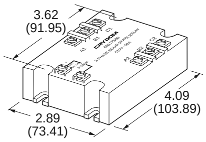


Dual Relay

Quad Relay

Two (Dual) or four (Quad) totally independent AC output relays come in a single standard panel-mount package. Utilizing an AC switch output with internal snubber, relays provide greater protection against false triggering.

Fig. 4



• SCR Output • AC or DC Control • LED Status Indicator Three-phase solid state relays switch up to 530 Vrms directly to loads such as motors, transformers, heating elements, etc. Models are available with either AC or DC input (coil). For heatsink use part number CC1114-ND.

MCTC SSR Temperature

The Crydom MCTC is a unique self-contained state of the art basic temperature controller that combines all the necessary functions into one easy to set up and use standard size package. The MCTC is ideal for temperture control users that do not need multiple built-in options, displays and functions that they will never use. The unit incorporates an internally compensated thermocouple input (J or K), available temperature range of 100~500°F, with adjustable set point using analog voltage of 0-5VDC. With integrated zerocross burst firing, and proportional derivative control to avoid set-point overshoot, the unit also includes 2 LED status indicators for visual reference of operation and set point conditions.

Tight Seal IP68 Nylon Cable Grips (Glands) with Lock Nuts

Application: The use of synthetic cable grips is almost unlimited within the electrical and electronics industry. Installations where cables must be led safely through a wall of an enclosure will be specified with cable grips. Synthetic cable grips are specified to: • Secure the cable to the enclosure's wall to provide excellent pull-out resistance. • Seal and protect the inside of the enclosure from the unwanted affects of the environment. These contaminants may be water, gas, chemical vapors, or fumes. • Reduce material cost due to use of lighter, less expensive materials, as well as, eliminating the need for running conduit.

Technical Data:
- **Material:** Polyamide PA 6, Self-Extinguishing, Halogen-free

3M Heat Shrinkable Tubing

KYNAR®, EPS-300, SFTW202 GYS, SFTW203, 8420 & 8440 Series

KYNAR® Series-Modified Polyvinylidene Fluoride: Shrink Temperature: 175°C (347°F). **Color:** Clear. **Shrink Ratio:** 2:1. Cross-linked, thin-walled tubing offers a high degree of mechanical strength and high temperature resistance. This has outstanding abrasion resistance and cut-through properties in combination with high dielectric strength. It is inherently flame retardant, semi-rigid and highly resistant to most industrial fuels, chemicals and solvents. Kynar® is a registered trademark of Elf Atochem North America, Inc.
EPS-300 Series-Adhesive-Lined Flexible Polyolefin: Shrink Temperature: 121°C (250°F). **Color:** Black. **Shrink Ratio:** 3:1. Rapidly shrinks to a skintight fit, forcing the melted adhesive to flow and cover the substrate. The adhesive forms a flexible bond with a wide variety of rubbers, plastics and metals. Upon cooling, the adhesive solidifies forming a permanent, non-drying, flexible and water resistent barrier.
SFTW202 GYS Series-Very Flexible Polyolefin: Shrink Temperature: 100°C (212°F). **Color:** Green and yellow striped. **Shrink Ratio:** 2:1. Meets performance requirements of MIL-I-23053/5 Class 1, and is UL Recognized (File No. E48398) for flame retardance. Can be easily surface painted.
SFTW203 Series-Very Flexible Polyolefin: Shrink Temperature: 100°C (212°F). **Color:** Black. **Shrink Ratio:** 3:1. Meets performance requirements of MIL-I-23053/5 Class 1, and is UL Recognized (File No. E48398) for flame retardance. Can be easily surface painted.
8420 Series-EPDM and 8440 Series-Silicone Rubber Tubes: Color: Black (8420 Series) and Gray (8440 Series). **Cold Shrink™ Insulators-**Open-ended, tubular rubber sleeves that are factory expanded and assembled onto a removable plastic core. Provides a reliable seal without the use of heat, a torch or adhesive - simply position and unwind the core allowing the tube to shrink and form a water-resistant seal.

Butyl Rubber Shrink Tape

DAFLEX ST250 cold shrinking Stretch-N-Seal tape requires no heat to provide a secure covering where the size and/or shape of an object does not permit the use of shrinkable tubing. Simply remove 2" to 3" of tape from the roll, remove the liner, stretch tape to 50% of the supplied width and wrap it spirally around the object, with 50% overlap. In minutes the tape will react with itself to form a mass which will provide protection from moisture, most chemicals, over 1KV per mil. DAFLEX ST250 can be removed easily without leaving any residue since the tape does not use a mastic or adhesive liner. Shelf life is over 5 years. It is helpful for covering, sealing, splicing, holding bundles, joining and repair applications.

Specifications: • **Operating Temperature:** -40°C ~ 130°C • UL Approved for 100°C

Electret Condenser Microphone and Holders

Electret condenser microphones consist of a high voltage internal electret membrane, a metal electrode and a field effect transistor (FET). They are manufactured in a quality controlled facility in China. All microphones are produced with Japanese made FETs to ensure high quality and reliability. This along with 100% testing ensure a zero defect rate. Horn's commitment to quality has earned them approval from a famous global manufacturer of mobile phones. Horn's ECMs utilize a highly efficient, low impedance design, available in omni directional, unidirectional and noise canceling versions. All microphones are non-washable.

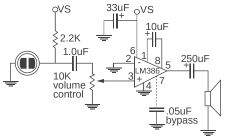
Electret Condenser Microphone Cartridge



Consists of a high voltage internal electret membrane, metal electrode and a Field Effect Transistor (FET). Doesn't need a high-voltage bias from the outside like ordinary condenser microphones. **Features:** Highly efficient electrical specification, pressure type operating principle, low impedance (2.2kΩ), omnidirectional back directivity and a high degree of reliability under adverse shock, vibration and environmental tests. **Applications:** Telephone and telephone answering devices, tape recorders, intercoms, computer modems, completed microphones for recording, testing and monitoring, hearing aids, sonic controlled toys and sensors and others. All buzzers and microphones are non-washable.

Wire Saddle

Wire Saddles are ideal for routing wires or optical fiber. Wires can be easily inserted into the top side of the saddle to protect them from abrasion. The "micro" is ideal for low profile applications and takes up very little real estate.

The MOFNSA is designed to snap into a .125" diameter hole in a .093" thick panel for applications that require a thicker board than the standard 1/16" board.

CITIZEN® Thermal Printers

THERMAL PRINTERS:

Use a non-impact method for printing. This is accomplished by using chemically treated thermal paper. Chemicals suspended in the paper react to heat generated by the print head to form dots that make up the characters or image. Citizen offers a thermal serial printer and a thermal line printer.

The serial printer uses a moving head that prints one character at a time, it is most suited for character printing, although the high speed model does support graphics. Its main benefit is low cost. Line printers have a fixed print head, printing one line at a time. It is suited for both high speed character and graphic printing. Its main benefits are higher definition graphic printing along with fewer moving parts.

INTERFACE BOARDS:

Acts as an interface between user's system and the thermal printer. Monitors temperature and paper status. Controls motor(s) and thermal head energy for optimal printing. Generates built in test pattern. Accepts both simplified Centronics or RS-232C (TTL only) interface.

NOTE: CBMA now markets the former Panasonic line of Thermal Printer Mechanisms. Please call Digi-Key for details.

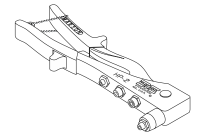
Hand Rivet Tools

HP-2®/39000



The HP-2 is the largest selling hand rivet tool in the industry. Its square shoulder fulcrum pin of cold-formed heat-treated steel prevents pin rotation that can elongate the engaging holes and cause premature tool failure in imitation tools. The HP-2 hand rivet tool sets up to 3/16" steel rivets and comes with four mounted nosepieces (3/32". 1/8". 5/32" and 3/16") and a service wrench.

3M Super Strips and Circuit Strips

Universal Breadboarding Elements with Solderless Plug-In Tie Points

As with all solderless breadboarding units from 3M, components simply plug-in and are interconnected with ordinary solid hook-up wire; #22 AWG is recommended.

All sizes of DIPs and discrete components with lead diameters up to .032” (.82mm) can be accommodated.

These handy strips may be permanently mounted with the integral non-shorting instant-mounting backing, or for quick removal, they may be mounted with screws on panels up to 1/8” (3.18mm) thick.

Hardware and mounting templates are provided with every strip.

Prototype Boards

Vector Prototyping Boards with punched holes are convenient economical tools for assembling circuit components and cost effective alternatives to custom designs. Use general purpose Plugboards and Bus specific for edgeboard connection prototyping, while Circboards are ideal for cutting down to smaller board sizes.
• Holes on 0.1" (2.54mm) grid .042" (1.07mm) diameter (.043" [1.09mm] on V1018 and V1029) • Ejector Hole • Plating: Gold/Nickel • Board Material: Epoxy Glass Composite.

PC/XT and AT Expansion Units:
• Marked edge contact identification • Gold plated edge contacts on 0.1" centers • Power and ground buses terminate to connectors • Pads on board and bracket accepts DB9-, 15-, 25- or 37-Pin I/O connector • Accepts Vector's press terminals for wiring & soldering • Holes are .042" (1.07mm) diameter or 0.1" (2.54mm) grid • 1/16" (1.59mm) thick epoxy glass material, gold/nickel contacts • Universal mounting bracket and card guide included • Layout planning sheets and instructions included • Plugs into any IBM AT slot with dual connectors (AT unit only) • Pads for mounting dual, row 0.1" (2.54mm) spaced header (AT unit only)

Circbords™: • .042" (1.07mm) diameter holes on 0.1" (2.54mm) grid • 1/16" (1.59mm) thick, epoxy glass composite boards • Flame retardant • Etched copper patterns are solder plated.

VME/DIN Backplanes

Vector Monolithic Series back planes are designed to meet VMEbus Specification Rev C1 and Rev D. All termination is placed inboard of the two end connectors to allow the maximum number of slots (21) in a 19" RETMA rack. Decoupling capacitors are provided at the ends. The resulting improved power distrubution as well as signal shielding in ground layers creates a high performance back plane with low signal cross talks. Press-fit 96-pin DIN connectors are used. The "P" series which uses a 10-pin power block or "bug" and #6-32 hardware or the "M" series which uses a combination of power bugs and Mate-N-Lok connectors.

Extender Cards

Bus extender cards allow units under test (UUT) to be developed in functioning systems. The extenders allow access to the UUT and prevent damage to test systems from repeated removals and insertions. Models with test point allow monitoring of signal activity.

SMT Adapter Boards

Surface mount components are soldered to pads on boards. Traces extend from pads to prototyping holes on standard 0.1" x 0.1" (2.54mm x 2.54mm) grid. Individual leads can be monitored or other components can be added to evaluate performance of surface mount product. Saves time and prototyping cost. All boards made with FR4 laminate, and featuring ground plane on back side. Pad to pad spacing (pitch) is measured in mils (thousandths of inch).

SURFBOARDS® by CAPITAL ADVANCED TECHNOLOGIES INC.™ The Breadboarding Medium for Surface Mount

The Surfboard Concept: The concept behind SURFBOARDS is elegantly simple. Many models incorporate foil patterns that are designed to accommodate a wide variety of component mounting footprints. SURFBOARD® models for SOICs and PLCCs provide standard mounting footprints for the IC and depending on the model chosen, will include a prototyping area for additional components or provide a direct pin-out. Most SURFBOARD® models feature SIP (single in line) pins that make prototyping and interfacing with other circuits easy.

Specifications: • Material: G-10 FR-4 Fiberglass laminate, 1oz. Cu. .032" (.81mm). Thickness ±.005" (±.13mm) • Finish: Level 60/40 Solder alloy • S.I.P. Pins: On applicable models. Soldered on .100" (2.54mm) centers. SURFBOARDS® can be hand soldered and are compatible with most industrial soldering processes. (Suggested soldering and assembly guidelines included).

The universal circuit patterns allow for the mounting of 0603, 0805, 1206 and mini-melf packages as well as a wide variety of 3 terminal devices.

The 33000 Series of Surfboards® are application-specific adapters that convert surface mount component footprints to Single-In-Line (SIP) format. The boards feature pre-installed pins on .100" (2.54mm) centers making them compatible with conventional breadboards, solderless breadboards, and sockets. The SIP format provides ease of signal probing as well as higher densities when prototyping. Models are available to accept a wide range of surface mount semiconductors and integrated circuits.

Models 33113 and 33623 feature two SIP pins for each pad for higher current applications. Model 33213 features large soldering pads as connection points and SIP pins for measuring purposes. Boards are .031" ± .005" (.79mm ±.13mm) thick FR-4 and feature solder-coated 1-oz. Circuit Foils that can be hand-soldered or soldered by most conventional processes.

SIP pins are soldered in place on .100" (2.54mm) centers. All boards feature solder mask to limit flow of solder to pad area and aid assembly. Just add parts and plug in.

Dissipative Mats

8200 Series:

Vinyl mats are soft table and floor mats with a unique three-layer construction. The top layer is durable static dissipative vinyl, which has sufficiently low resistance to discharge static-laden conductors, yet will prevent the shorting of pins on the backs of printed circuit boards laid on the mat.

8200 Series Floor Mats includes one 15 foot (4.6m) 3040 Ground Cord and two 3050 Snap Fasteners (installed).

8210 Series Table Mats includes two 3M 3050 Snap Fasteners (installed) and one 3M 3048 Wrist Strap Grounding System. Wrist Straps must be ordered separately.

8800 Series:

Rubber mats consist of a top layer of static dissipative rubber laminated to a bottom layer of conductive rubber. Both layers are made from vulcanized synthetic rubber, which offers excellent resistance to oil, grease and most common solvents. They offer superior resistance to heat and hot solder as compared to vinyl or olefinic materials.

8810 Series Table Mats includes two 3034 Snap Fasteners (installed) and one 3048 Wrist Strap Grounding System. Wrist Straps must be ordered separately.

Wrist Strap Workstation Monitor

The 3M 724 Wrist Strap Workstation Monitor continuously verifies the resistance of the operator and work surface ground connections. The monitor uses a reliable resistance method that actually includes the operator's skin resistance to determine if the system is operating properly. If the operator's resistance exceeds 10 megohms or 35 megohms, or the wiring connections exceed 3.7 megohms, audible and visible alarms are triggered. The unit will also warn of potentially dangerous low-resistance situations.

The monitor uses the light and compact dual conductor wrist strap. Dual conductors provide the resistance circuit that is monitored as well as provide grounding redundancy. If one conductor fails, the other will still function to prevent sensitive components from being exposed to static.

Comes complete with a quick connect/disconnect 732 Remote Jack and mounting hardware.

METCAL
DIVISION OF OK INTERNATIONAL

MX Series Rework Soldering Systems & Replacement Parts

Features: SmartHeat® Technology. Metcal's tip cartridges sense the load and instantly adjust power to quickly deliver the right amount of heat precisely where it is needed. Metcal systems use SmartHeat technology that is incapable of overshoot and can deliver high throughput at lower temperatures. Because the interchangeable SmartHeat cartridges contain a heater and temperature self-regulating alloy, Smart-Heat systems require no calibration. SmartHeat technology systems need no dials or readouts, tip cartridges specify the temperature by series, providing continuous temperature for fast, easy, and safe soldering.
Metcal's Talon® easy-squeeze design makes removing SMD components a snap. Talon was designed with ergonomics, style, and superior performance in mind. Beveled edge tips allows rework of several different components without changing tip cartridges.

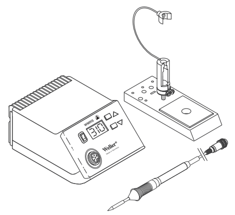
WMRS Soldering and Rework Station



The Weller WMRS was specially developed for industrial production applications, rework and repair, and laboratory use. The WMRP soldering pencil has an extremely short heat-up time (approx. 2 seconds from standby to setpoint temperature). Changing soldering tips is quick, easy, and most importantly requires no tools. The small lightweight (just 75g) construction of the WMRP soldering pencil makes work both easy and comfortable. The built-in Stop+Go function in the safety rest reduces the temperature of the tip when the pencil is inserted.

Specifications:

• Voltage: 120V (input) 24V (output) • Footprint: 6.5 x 4.5 x 4.0 inches (65 x 115 x 102 mm) • Power Consumption: 80W nominal • Temperature Range: 150°F ~ 850°F (50°C ~ 450°C) • Accuracy of soldering pencil: +/- 9°F (+/-5°C) • Temperature Stability: +/- 9°F (+/-5°C) • ESD safe

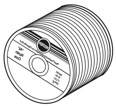
"331" Organic Water Soluble Solder



Kester "331" Organic Flux is a water soluble formula for use in flux-cored solder wire. Kester "331" flux is more effective than rosin fluxes in soldering difficult metals and allows a simple water wash for flux cleanup. The flux is more heat stable than most organic fluxes, resulting in minimal smoke and odor. The residue can be completely removed with a simple water rinse. Kester "331" is classified as type ORH1 per IPC ANSI/J-STD-004. Red Label.

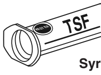
Paste Flux and Liquid Flux Pens

Flux - Pen

Rosin Paste



Syringe

Kester flux pens use a spring-loaded tip to dispense just the right amount of flux while preventing the flux inside from drying out. Tacky Solder Flux is a No-Clean paste flux that maintains its characteristics for up to 8 hours after dispensing and can be used in a wide range of temperature and humidity conditions. Can reflow in both air and nitrogen environments. SP244 is a mildly activated rosin paste flux designed to be used as a No-Clean formula for rework applications.

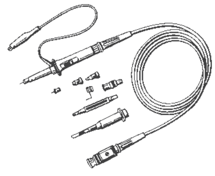
High-Performance Oscilloscope Probes

IEC 1010 Category I or Category II Compliance



It is important that you select a probe with the same bandwidth or “frequency range” as the oscilloscope used for the job. For example, if you’re using a 100 MHz oscilloscope, choose a probe with a minimum of 100MHz. To achieve optimum performance, choose a probe with more than twice the bandwidth of the oscilloscope.

Category I This slim design comes equipped with interchangeable cables, probe tips and grooved heads. Compensation adjustment placed in the BNC eliminates noise and interference related pickup. Available in switchable and non-switchable versions.

Category II This versatile design offers three monolithic interchangeable probes in 60, 100, and 250MHz bandwidth.
